

JMJ Bulk Packaging

ENVIRONMENTAL POLICY

JMJ Bulk Packaging Ltd is committed to minimising the impact of its operations on the environment throughout its business activities, wherever this is practicable. We recognise that the pursuit of economic growth and a healthy environment must be closely linked. Our environmental responsibility is based upon continuous improvements, consistent with current knowledge.

Our products are all sourced from factories, which have been audited to confirm compliance with environmental best practice, against published environmental policies.

In our offices we have implemented a range of energy efficiency initiatives to minimise our environmental impact.

Our vehicles all have emission control systems built in by the manufacturer to latest EC specifications. Our operator's licence ensures we have a six weekly service and safety check, which again ensures maximum safety and minimum emissions.

BULK BAGS

All our FIBC's are manufactured from 100% polypropylene, which is a recyclable material. Our solutions always use higher quality polymers, and improved design, in order to reduce the weights of fabrics used, without compromising the safety of the product. Wherever possible a re-usable product is promoted.
